Hint 1. Reconfigure ShineWiFi-S to home router

When you have changed your home router password, or changed to a new router, you need to reset ShineWiFi to factory settings and reconfigure it. Remove the rubber plug, and press the KEY button for 6 sec, until all three LEDs long light up, then login to your ShinePhone account, click the "+" on right top of this page, long press the datalogger serial number to reconfigure.

Hint 2. Advanced web server settings

Please make the settings below only with a professional guide.

When the configuration of the ShineWiFi-S with the ShinePhone APP failed or you need to set a static IP-address for the ShineWiFi-S module, follow the guide below to configure it with the internal web server.

Remove the rubber plug of the KEY button, and short press the button inside. The blue LED will light up. Use your phone or computer to connect to the wireless network emitted by the ShineWiFi-S module. The network name/SSID is the serial number of the ShineWiFi-S module.

1. Login Page

After the connection is successfully established, open the web browser on your phone or computer and type 192.168.10.100 in the address bar. The username is admin, the default password is 12345678.

2. Wireless Router Settings

You can set the home router information via this page.

- a. Default is the Auto" mode, select your home router network from the wifi list. Enter the password and click "Apply" to save the settings.
- b. If you select the "Manual" mode, then please enter the wifi name/SSID and password manually, click "Apply" to save the settings.
